

System more  
vulnerable  
to collapse

**AMOC weakens**  
( $\Psi_{max}$ : 22→18 Sv)

**Deeper in  
bistable regime**

**Less northward  
salt transport**

+

positive  
feedback

$F_{ovs}$  becomes  
more negative

**Salt accumulates  
in South Atlantic  
(pile-up  $\Delta S \uparrow$ )**

Saltier water feeds  
upper AMOC limb  
at 34.5°S

**Salt-Advection Feedback Loop (Rahmstorf 1996)**
